

Using bandit poll

For using the bandit poller we first need to get information from a live game session:

Fetching client authentication token

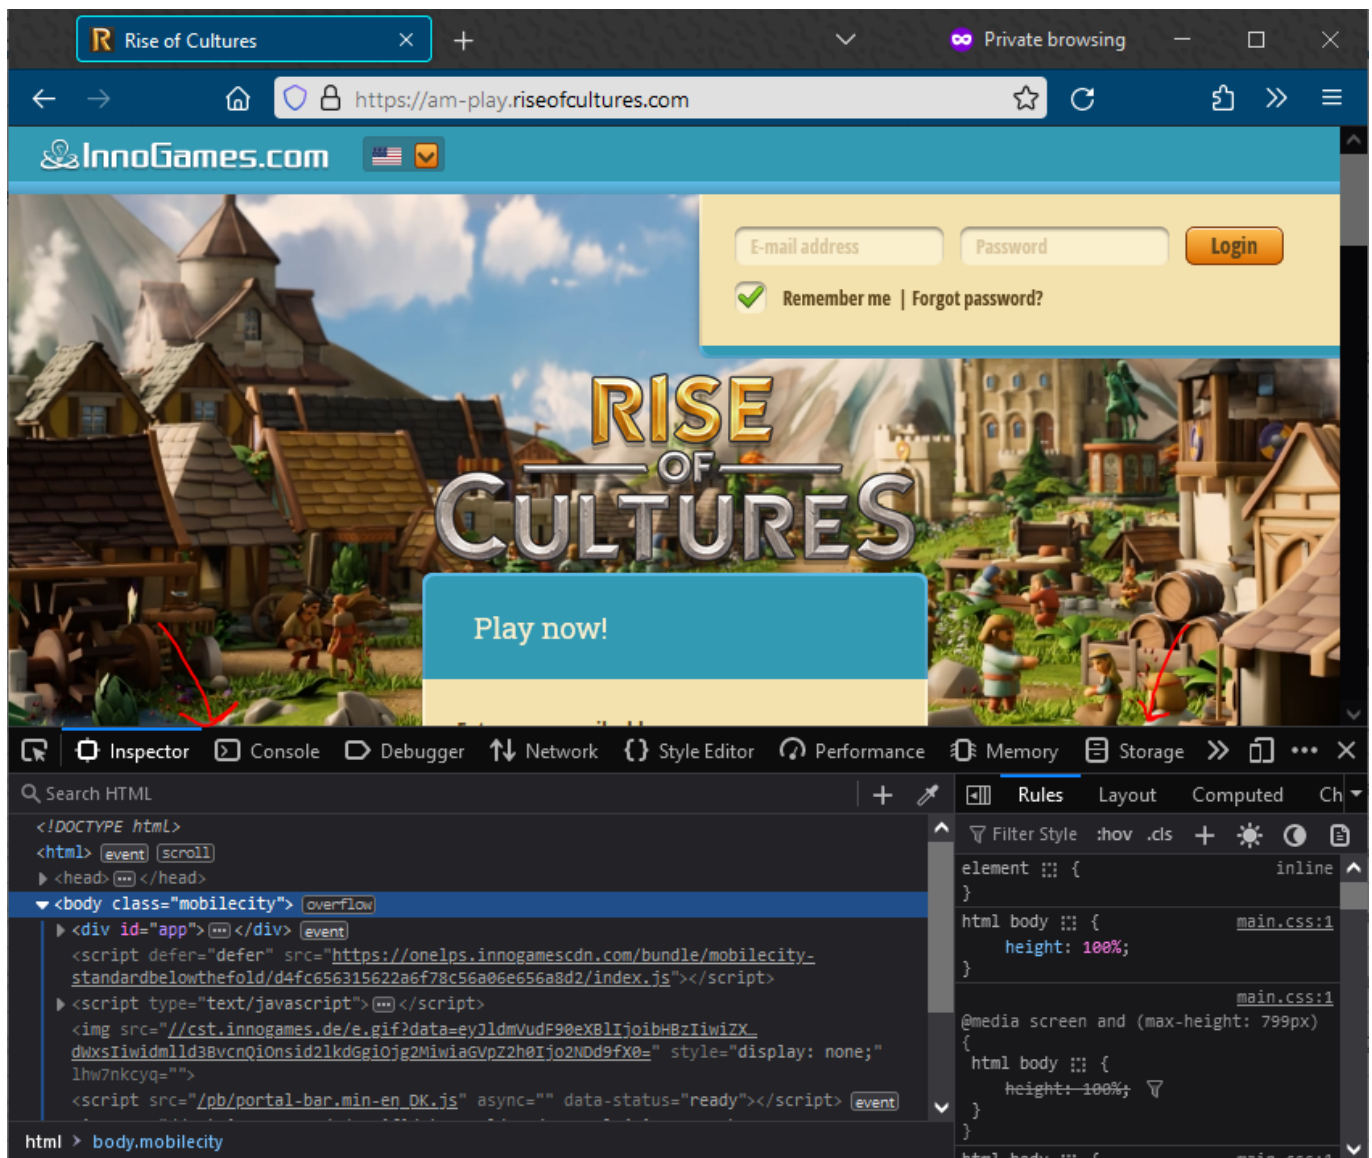

Getting the AuthToken is very simple, you just have to log-in on your account in a browser. Chrome/Firefox etc.

0. Open Dev-tools before logging in

Open the browser developer tools before logging in to your RoC account.

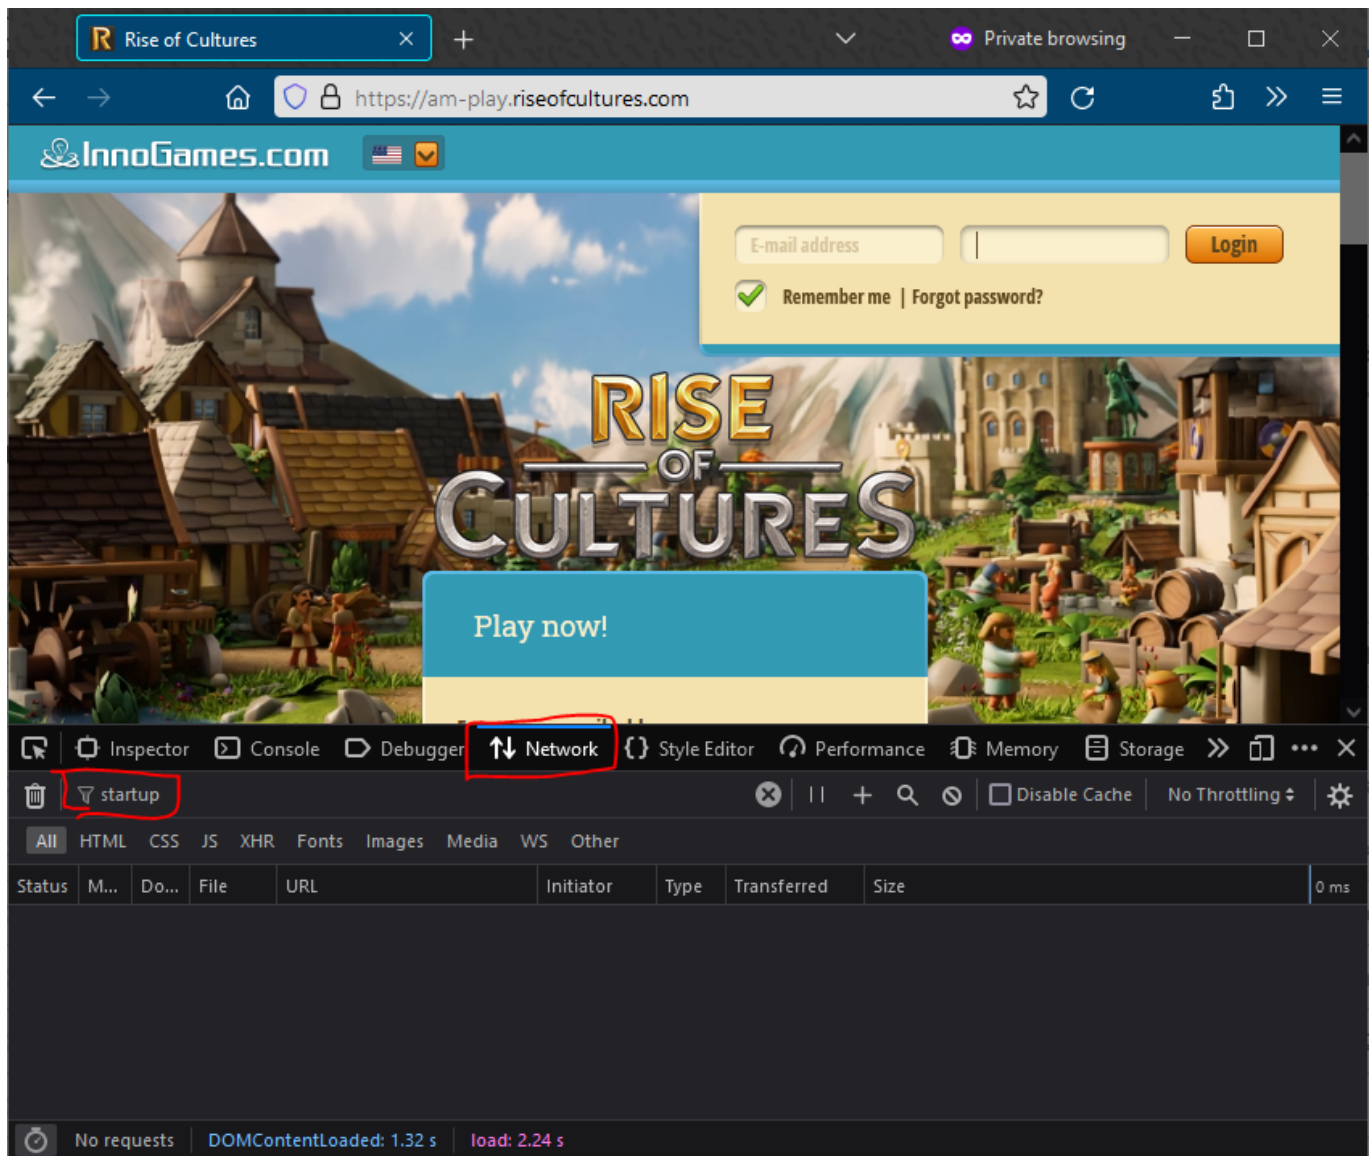

- Firefox: Ctrl+Shift+I
- Chrome: Ctrl+Shift+I

You should see a bar on the bottom part of the browser now:

1. Go to network tab and look for "startup"

Go to the "Network" tab in the dev-tools and type "startup" in the filter toolbox:

2. Log-in to your account

Log-in to your account with your email and password as usual. Wait for your city to show up.

You will notice some entries in the "Network" tab. There should be 2 entries with "startup". Select the 2nd one:

Once selected, on the right there should appear a box with more information. Select the "Headers" tab and then scroll all the way to the bottom.

There you'll see the `X-AUTH-TOKEN` and the `X-ClientVersion` fields. Those values are what we need!

⚠️ Do not log-out, everytime you log-out the AuthToken changes ⚠️

Using the bandit poller

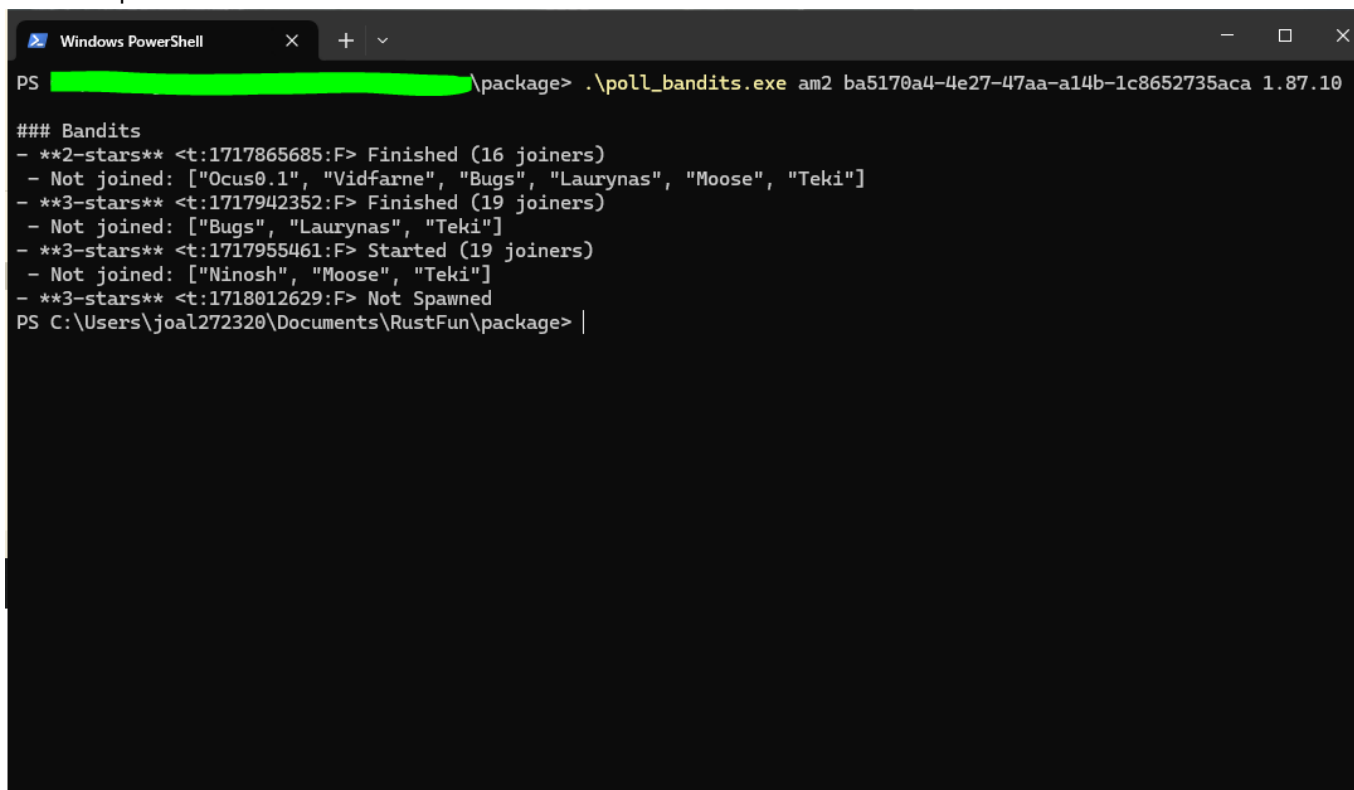

Now that we have the AuthToken and ClientVersion we can execute the bandit poller to fetch bandit information!

You need to do it in a command line, Windows terminal or Powershell is fine. Open the terminal in the same folder as the `poll_bandits.exe`.

Then execute it like this: `./poll_bandits.exe <server> <auth_token> <client_version>` -> Press Enter

It will then print the next bandit times already with the timestamp that Discord knows (the `<t:XXX:F>` part). Simply copy paste that in Discord and you are done!

For example:

```
Windows PowerShell
PS C:\Users\joal272320\Documents\RustFun\package> .\poll_bandits.exe am2 ba5170a4-4e27-47aa-a14b-1c8652735aca 1.87.10

### Bandits
- **2-stars** <t:1717865685:F> Finished (16 joiners)
  - Not joined: ["Ocus0.1", "Vidfarme", "Bugs", "Laurynas", "Moose", "Teki"]
- **3-stars** <t:1717942352:F> Finished (19 joiners)
  - Not joined: ["Bugs", "Laurynas", "Teki"]
- **3-stars** <t:1717955461:F> Started (19 joiners)
  - Not joined: ["Ninosh", "Moose", "Teki"]
- **3-stars** <t:1718012629:F> Not Spawned
PS C:\Users\joal272320\Documents\RustFun\package> |
```

PS: If you wanna see what the timestamp corresponds to, go to <https://www.timestamp-converter.com/> and paste those numbers (like: 1718012629) in the "Unix Timestamp" section. There you can see the time in your timezone.
